

IN THE SPECIFICATION

At page 1 of the of the application, after the title, as the first line of text, please add the following:

a1 --The present application is a divisional of U.S. application 08/960,190, filed October 29, 1997, now issued as U.S. Patent 6,232,445.--

Please replace the abstract with the following amended abstract:

a2 --The present invention relates to complexes of major histocompatibility complex (MHC) molecules and uses of such complexes. In one aspect, the invention relates to single chain MHC class II complexes that include a class II β 2 chain modification, e.g., deletion of essentially the entire class II β 2 chain. In another aspect, the invention features single chain MHC class II which comprise an immunoglobulin constant chain or fragment. Further provided are polyspecific MHC complexes comprising at least one single chain MHC class II molecule. MHC complexes of the invention are useful for a variety of applications including: 1) in vitro screens for identification and isolation of peptides that modulate activity of selected T cells, including peptides that are T cell receptor antagonists and partial agonists, and 2) methods for suppressing or inducing an immune response in a mammal.--
